### Mothballing Your Drilling Rig

"Cost is the long run that a not saving much at all."  
Take the necessary steps to protect it now so it's ready for the future.

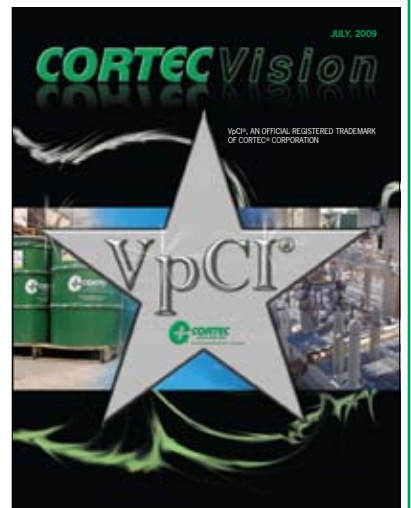

**What's Mothballing?**  
The answer is a drilling rig that is left idle for a period of time. During this time, the rig is susceptible to corrosion and other damage. Mothballing is the process of protecting the rig from these elements. This is done by applying a protective coating to the rig's metal parts. This coating prevents corrosion and other damage from occurring. The rig is then stored in a dry, protected area. When the rig is needed again, it can be removed from storage and used without any problems.

**What's the Benefit?**  
The benefit of mothballing is that it allows a drilling rig to be stored for a long period of time without any damage. This is important because drilling rigs are expensive and can be difficult to replace. Mothballing ensures that the rig is in good condition when it is needed again. This saves money and ensures that the rig is ready to go when it is needed.

### NEWS ALERT

July 6<sup>th</sup> 2009

#### Eco Works® T-shirt bags

Eco Works® team is proud to announce that new Eco Works® T-shirt bags are now available for distribution throughout the world at highly competitive pricing, making Eco Cortec® Croatia global supplier of this new product.

Eco Works® Biodegradable is Compostable film and bags are specifically designed to replace LDPE, LLDPE and HDPE film and in a wide variety of applications ranging from protective industrial film, retail packaging and agricultural film to high performance organic collection bags with deodorizing closures. Eco Works® T-shirt bags have properties superior to traditional non-biodegradable bags without sacrificing biodegradability or compostability. Eco Works® is internationally certified product with collection bag for ASTM and DIN 58900.

As compatibility and environmental strength become more and more important, Eco Works® offers a very sustainable and responsible alternative to most films.

used in retail storage, shipping, display and packaging.

**FEATURES**

- 100% Biodegradable & Compostable
- Contains NO PCIBS/PHS/DE
- Superior strength, available in 4 mil and 6 mil
- Appearance comparable to LDPE
- Contains annually renewable, bio-based resin (corn)
- Biodegradable of the same rate as common

Available in 4 mil and 6 mil thicknesses. Contact us for more information.
