CORTEC WORLD HEADQUARTERS IS PLEASED TO ANNOUNCE.

SALES & PRODUCT TRAINING

Join us at Cortec for two full days of learning and discovery! Whether you are looking to get to know Cortec, a little better or are just now being introduced, our Sales and Product Training at corporate headquarters in **Saint Paul, Minnesota** familiarizes Cortec representatives and distributors with our company and products. Come and meet the sales managers, laboratory personnel, customer service, and the supporting team, ask us questions and tour our facilities, and, most importantly, walk away knowing more about Cortec than ever before.

Training will begin on **Monday, August 24th, 2009** and will end on the afternoon of **Tuesday, August 25th, 2009**. Attached is a registration agenda complete with descriptions for each session. Please note the options for sessions on Monday and Tuesday afternoon and the discussion over dinner on Monday evening. To register, please **fax** or **e-mail** the completed form to:

Karen Rosale
Fax: 652.429.1122
e-mail: krosale@corotec.com

The deadline for registration is **August 14th, 2009**. For any questions, please contact Karen at the above e-mail address or by phone at: 652.429.1100 x152. We look forward to seeing you!

PRODUCT SPOTLIGHT

CorrTainer™ Brand of Coated Corrugated Boxes

Cortec® has spent 30 years testing products to ensure reliable results within the packaging industry. The findings show that Cortec® products come out on top when it comes to corrosion protection, cost effectiveness, and environmental responsibility. CorrTainer™ is no exception....

NEWS ALERT
Oxo Additives Create More Problems Than They Solve

Cortec® Corporation has developed several families of certified compostable film technologies, including Eco Works® and Eco-Corr Film® that are certified commercially compostable per ASTM D 6400 and EN 13432 by BPI and Din Certco. All films that Cortec® manufactures are "biodegradable" under these international specifications and go through rigorous lab work before going to market. These films are made available for waste diversion goals of corporations that want to remove as much material from landfills and incinerators as possible. The latest generation from Cortec® also includes renewable content that further improves the sustainability of Cortec's bioplastic options.

Other technology marketed as "oxo-degradable", where chemicals are added to traditional plastics in an attempt to break them into smaller pieces, has been around since the mid 1980s. The following article from CDS Chemical Business alerts, there are several concerns with these oxo-degradable technologies.

OXO-ADDED FILMS WILL NOT HELP EUROPE'S RECYCLING

Europe is looking for market in order of sustainable development, thanks to the introduction of European legislation aiming to protect the environment.

The European Treaty of Lisbon goes even further: it says that the EU should aim to "improve the quality of the environment" and put pressure on new technologies as the way to achieve that.

However, the same technology being used elsewhere than in Europe for certain uses. This is the case for the OXO-degradable additives used for plastic for several years.

Finally, plastic is like an energy bank. Once the energy is used by a polymerization, one can transform the energy into stable products. Depending on the product cycle, the energy produced can be mechanically recycled or incinerated to regenerate the original energy.

Therefore, it looks like the plastic has an energy value. But the use of OXO-degradable additives will completely destroy the stored energy of the material.
