

Double the Durability of your Concrete

Cracked Beam Testing of Admixtures

Details: www.CortecMCI.com

Cortec® Migratory Corrosion Inhibitors™ MCI® extend the durability of concrete by doubling the time before the onset of corrosive attack and reducing corrosion rates up to 80%. Cracked beam testing based on ASTM G 109 shows how MCIs can extend the life of your high durability concrete. It means that the building, bridge, pier or deck designed for a long service life won't get dealt a premature service-life by mother nature in its building phase.
