Remarkable Presentation at COSTRUTECH 2006

November 6, 2006

QUIMILOCK S.A., Cortec's official distributor for Spain and Portugal, had a great presence and success at "COSTRUTECH 2006" - a prestigious construction tradeshow in Madrid, Spain, held on October 9-12.

Quimilock's booth, over 100 square meters, was one of the largest and finest at this trade show, neighbouring major companies like Sika, Grace, and BASF. Compared to those companies, Quimilock's exhibit was focused entirely on corrosion protection solutions for concrete and metal structures featuring Cortec's MCI® Technology and VpCI™ High Performance Coatings. Quimilock presented a series of superb photographs of public construction and construction repair projects such as airport control towers, port docks, the main potable water res-

ervoir in Madrid, nuclear plants, highways, and high speed train structures throughout Spain where Cortec's corrosion solution products have been applied.

A large number of visitors, among them engineers, contractors, and architects were interested in Cortec's MCI® (Migratory Corrosion Inhibitors) Technology. Quimilock included a visual presentation featuring MCI® Technology characteristics and various applications.

Cortec is pleased to congratulate Enrique Nieto, President of Quimilock, and his team for their remarkable presence at COSTRUTECH that strengthened Quimilock-Cortec's success and leadership in the corrosion control solutions for the concrete industry in Spain.

Cortec® Corporation is a pioneer of environmentally friendly, corrosion protection Vapor phase Corrosion Inhibitors (VpCI™) & Migratory Corrosion Inhibitors (MCI®) technologies for the Packaging, Metalworking, Construction, Electronics, Water Treatment, Oil & Gas and other industries. Headquartered in St. Paul, Minnesota, Cortec® manufactures over 400 products distributed worldwide. ISO 9001 & ISO 14001:2004 Certified.
