

NEWS ALERT

Cortec's MCI®-2012 Integrapel Featured In April Issue of Coatings Tech Magazine!

Corrosion Inhibitor

A product release from Cortec describes the new MCI®-2012 Integrapel. A water-based organic admixture, MCI-2012 provides waterproofing and corrosion inhibiting of steel reinforcement in new concrete structures. It uses a double approach to directly protect embedded steel by both lessening the intrusion of corrosive species into the concrete and providing a protective layer on embedded reinforcement. Well suited to concrete construction exposed to corrosive environments with carbonation, chlorides, and atmospheric attack, MCI-2012 is added to concrete prior to placement.
