Blastrac

Ideal for medium to larger sized jobs, the Blastrac® 1-15DS Global is a versatile, self-propelled 15" shot blasting system. The 1-15DS Global strips, cleans, and profiles concrete and asphalt in one easy step. Whether looking to improve traction and skid resistance or surface prepping for coatings and overlays, this unit will serve the purpose. Attached to the 6-54DC Blastrac dust collector, it operates virtually dust-free, containing debris and contaminants for a safer work environment and improved productivity. Contact Customer Service at 800-256-3440 for details.

Cortec Corporation

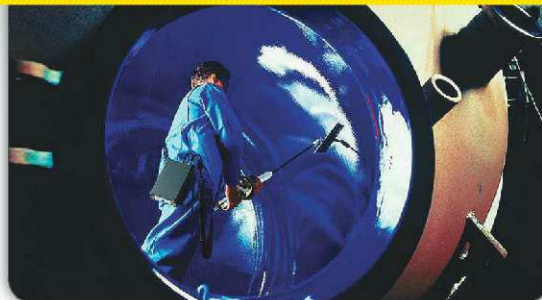

Cortec® Corporation presents the best anti-graffiti application available on the market – MCI® Wall Defense, a clear silicone elastomer based anti-graffiti coating that can be applied to exterior concrete, masonry, or metal surfaces. MCI® Wall Defense is designed to use over various types of coated or uncoated surfaces. Any graffiti can be immediately removed with a cold water pressure cleaning. Because the coating is permanent, there is no need to reapply after graffiti removal like alternative sacrificial systems. It is as simple as that!

Fischer Technology

To protect metal objects from corrosion they are coated with corrosion resistant materials such as rubber, synthetics, or enamel. These protective coatings need to be free of pores, cracks, or embedded foreign particles to keep the metal substrate from any danger of corrosion. With the Fischer **POROSCOPE®** Series of portable holiday detectors, defects in electrically non-conductive protective coatings can be discovered and counted, even if they are not visible to the eye. The **POROSCOPE®** supports various test standards and coating thicknesses. These standards can be set on the unit and the appropriate high voltage is automatically adjusted. There are various types of electrodes (Brush, Flat, Sweeper, Ring, Roller, etc.) available for your application.
