PRODUCT RELEASE

From green to black: Corrosorber® Pouches indicate when replacement is needed.

Cortec® Corrosorber® Pouches are a uniquely designed pouch containing an indicating powder which absorbs corrosive sulfurous gases such as hydrogen sulfide and volatile mercaptans. As the Corrosorber® Pouch absorbs these corrosive gases, the powder undergoes a color change from green to black, showing the user when it's time to replace the pouch. Corrosorber® Pouches will not release the corrosive gases back into the atmosphere; the reaction is irreversible, eliminating any concern about post contamination. The pouches are very convenient to use and only require replacement when completely changed from green to black.

Metals are attacked by gases such as hydrogen sulfide, mercaptans, and other sulfur compounds that can cause severe damage or failures to occur. Corrosorber® Pouches are a great complement to Vapor phase Corrosion Inhibitors (VpCI®) as it absorbs these gases, eliminating a source of corrosion, and allowing VpCIs to function more efficiently.

Corrosorber® Pouches are constructed from breathable Tyvek® on one side and clear PET film on the other, which allows for easy visualization and indication for when the product should be replaced.

Tyvek® is a registered trademark of DuPont
