

NEWS ALERT

Bionetix® Releases Probiotic Cleaner for Garbage Disposal Maintenance!

Bionetix® is pleased to announce the release of **ECO-DISPOSAL™**, a new foaming garbage disposal cleaner and freshener with probiotics! While standard garbage disposal cleaners often have to be used weekly to clean out the organic waste residues that can collect and produce bad kitchen drain odors, Bionetix® adds probiotics to its formula for extra, long-lasting garbage disposal maintenance power.

ECO-DISPOSAL™ is a foaming cleaner and freshener that contains billions of beneficial probiotics per pouch. These probiotics wake up when in contact with water and start digesting organic waste. After the initial treatment, the probiotics cling to the garbage disposal and drain walls for ongoing long-term waste digestion and garbage disposal maintenance benefits. By continuing to digest organic residue, ECO-DISPOSAL™ helps combat drain clogging and garbage disposal odors, likely reducing garbage disposal cleaning frequency.

ECO-DISPOSAL™ is easy to apply. Simply run some warm water (35-45 °C [95-113 °F]) into an empty garbage disposal that is turned off and insert an ECO-DISPOSAL™ pouch. Next, turn on the garbage disposal for just a few seconds, allowing foam to appear. The foam will recede after turning off the water and garbage disposal. A quick rinse with water completes the process, leaving behind a fresh smell and helpful living organisms to continue waste digestion!

This new probiotic garbage disposal cleaner is great for both private homeowners and commercial food industry establishments. In addition to drain and garbage disposal maintenance, it can be used to clean and maintain septic tanks, repopulating them with a healthy microbial colony for ongoing waste digestion. Contact Bionetix® today to learn about adding ECO-DISPOSAL™ to your garbage disposal or septic system:
