PRODUCT NEWS RELEASE

Cortec® Corporation's EcoCorr® ESD Film Provides Complete Protection for Electronic Parts.

EcoCorr® ESD Film, a 100% biodegradable and compostable film combines Cortec's patented Vapor phase Corrosion Inhibiting (VpCI™) technology with electro-static dissipative properties. In addition, Cortec® EcoCorr® ESD Film provides better tensile and tear strength; and ultimate elongation over low-density polyethylene films. EcoCorr® ESD Film is heat and water stable; does not disintegrate or break apart while in use. EcoCorr® ESD Film provides contact, barrier, VpCI™, and anti-static protection for up to two years depending on storage conditions. Once exposed to soil or compost conditions, Cortec® EcoCorr® ESD Film will

Electronic parts packaged in Cortec® EcoCorr® ESD Film receive continuous protection against excessive humidity, condensation, moisture, aggressive industrial atmosphere, and marine environments.

disintegrate rapidly within weeks and will not contaminate the soil.

Electronic parts packaged in Cortec® EcoCorr® ESD Film receive continuous protection against excessive humidity, condensation, moisture, aggressive industrial atmosphere, and marine environments. The VpCI's vaporize and then condense on all metal surfaces in the enclosed package. The VpCI™ molecules reach every metal area of the part, protecting its exterior as well as hard to reach interior surfaces. EcoCorr® ESD Film provides complete product protection during storage as well as during shipping. Once the film is no longer needed, EcoCorr® ESD Film can be composted and will degrade into carbon dioxide and water within weeks.

Cortec's EcoCorr® ESD Film is sold worldwide in forms ranging from retail packaging in Canada, agricultural packaging films in the United Kingdom, to automotive component transit and storage protection in Sweden. Several USA and International patents cover EcoCorr® ESD Film.
