### PRODUCT NEWS RELEASE

## Cortec® Corporation's EcoFlow™ System: Reduce Cost and Increase Production.

In industry there has been a continuous search for new, cost saving, innovative technologies to extend the working life of existing assets and infrastructure while lowering the environmental impact. The business of pipelines is no different in its search for smarter and greener solutions. As a large number of liquid transport pipelines continue to mature, maintenance and operating costs have continued to rise, compelling an increased focus on finding environmentally friendly, innovative answers to production difficulties.

Cortec® has worked to develop unsurpassed environmentally friendly solutions for pipeline problems. The EcoFlow™ System offers effective and targeted solutions to pipeline bottleneck problems, without the need for mechanical expansion. EcoFlow™ is an optimal combination of flow enhancing and corrosion, scale, and microbial inhibiting products allowing increased throughput with the unique effect of Vapor phase Corrosion Inhibiting (VpCI™) protection for pipelines carrying water or a mixture of water and hydrocarbon.

The EcoFlow™ combination of chemicals has been designed in such a way that the end user obtains the benefit of five prime additives for water treatment, blended in concentrations to obtain maximum performance with a single dosing system.
