PRODUCT NEWS RELEASE

### Cortec® Corporation Introduces an Innovative Water Soluble Packaging Solution.

Cortec® Corporation's EcoSol® is a water soluble, biodegradable, poly vinyl alcohol (PVA) film ideally suited for many packaging applications. Water-soluble PVA bags, sachets, or pouches created from this film provide a convenient, safe, and economical delivery system for a wide range of products, including detergents and cleaners, degreasers, concrete additives, pigments, biocides, water-treatment products, agricultural products, and others. EcoSol® has excellent organic solvent resistance, which allows EcoSol® pouches and bags to be used not only for dry powders, but also for liquid products. EcoSol® offers excellent mechanical properties including tensile strength along with tear and puncture resistance allowing it to be used in a wide variety of rigorous applications.

Cortec® Corporation's EcoSol® is a water soluble, biodegradable, poly vinyl alcohol (PVA) film ideally suited for many packaging applications.

EcoSol® expands Cortec's line of biodegradable materials: after a few minutes of immersion at the specified temperature, EcoSol® dissolves in water leaving a harmless, non-toxic aqueous solution of poly vinyl alcohol. Once the liquid solution of PVA comes into contact with common microorganisms such as those found in water-treatment plants, conversion to carbon dioxide and water takes place within about 30 days.

EcoSol® is available in sheets and bags in a variety of dimensions and thicknesses, is heat-sealable, and can be printed with standard inks.
