PRESS RELEASE

Cortec's MCI®-2007 Powder Packs a Punch in Florida.

Cortec® Corporation's MCI®-2007 Powder has been accepted by the Florida Department of Transportation into its Qualified Products List for use on highways and bridges.

MCI®-2007 Powder is a water reducing admixture with Cortec's exclusive Migratory Corrosion Inhibitor (MCI®) technology. It is polycarboxylate based and meets the Type F admixtures requirements of ASTM C494. MCI®-2007 Powder reduces mixing water by 20-30% depending on cement type. It protects reinforcement such as carbon steel, galvanized steel, and other metals embedded in concrete from corrosion induced by carbonation, chlorides, and atmospheric attack. MCI®-2007 is recommended for use in all reinforced, pre-stressed, and post-tensioned concretes.

MCI®-2007 Powder reduces mixing water by 20-30% depending on cement type. It protects reinforcement such as carbon steel, galvanized steel, and other metals embedded in concrete from corrosion induced by carbonation, chlorides, and atmospheric attack. MCI®-2007 is recommended for use in all reinforced, pre-stressed, and post-tensioned concretes.

MCI®-2007 Powder seeks out and forms a corrosion inhibiting protective layer on metals. When used with repair mortars and grouts, it will migrate to undisturbed concrete and provide effective corrosion protection to rebar already in place.

This is just the beginning to Cortec's success in combating corrosion in Florida's infrastructures.
