PRODUCT NEWS RELEASE

Cortec® Corporation's Brake Fluid Additive Extends the Life of Your Brake Systems.

Cortec® Corporation is proud to introduce M-408 a corrosion-inhibiting additive created for brake fluids. While compatible with DOT 3 and 4 brake fluids, it is especially effective with silicon-based fluids such as DOT 5. What separates M-408 from competitor products is its unique makeup. It will not alter the properties of brake fluids and it dramatically improves protection of brake systems, including high and low temperature serviceability, dry and wet boiling points, and compressibility.

When M-408 is added to brake fluid at a concentration level of 1 to 1.5% by weight, it provides corrosion protection for ferrous and yellow metals even in adverse conditions such as high temperature and high humidity. M-408 is not only the best solution for corrosion control and protection, but will also extend the life of the vehicle's brake system, making it the most economical choice.

M-408 will dramatically improve protection of brake systems without changing the properties of the brake fluid.
