PRESS RELEASE

Cortec® Announces New Video Visualizing Nano VpCI® Coatings Technology!

Cortec® Corporation has just released an exciting new video showing how Nano VpCI® Coatings differ from traditional corrosion inhibitor coatings. The two technologies are compared as applied on steel piping.

The video starts out by showing a shiny steel pipe installed

in outdoor conditions. Once Nano VpCI® coating is sprayed on the pipe, side-by-side windows

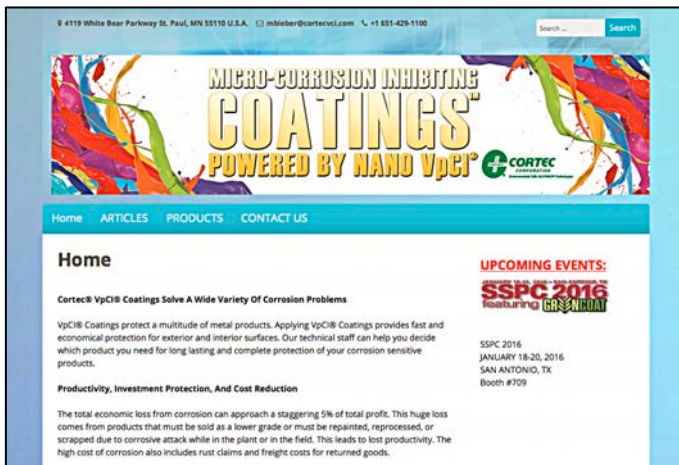

appear to compare the work of traditional inhibitors to Nano VpCI® inhibitors. Two metal substrate cross sections are magnified by a microscopic zoom to show uneven steel surfaces pocked with micro cavities. When magnified, particles from traditional inhibitors appear quite large compared to the micro

cavities, leaving gaps in the coating where micro corrosion can start. The tiny particles of Nano VpCI® are able to form a monomolecular layer of protection that tightly coats the surfaces of micro cavities. As shown in the video, the pipe treated with Cortec® Nano VpCI® is better protected from corrosion.

To visualize the concept of Nano VpCI® coating technology for yourself, please view the full animation at the following link: <http://cortecvci.com/videos.php>

Cortec® Corporation is the global leader in innovative, environmentally responsible VpCI® and MCI® corrosion control technologies for Packaging, Metalworking, Construction, Electronics, Water Treatment, Oil & Gas, and other industries. Our relentless dedication to sustainability, quality, service, and support is unmatched in the industry. Headquartered in St. Paul, Minnesota, Cortec® manufactures over 400 products distributed worldwide. ISO 9001, ISO 14001:2004, & ISO 17025 Certified.
