

NEWS ALERT

Cortec® has valuable contributors to promote MCI® products in Italy!

October 25, 2007

Throughout the year, PROIND, a Cortec® distributor in Italy specializing in MCI® products, has sponsored and organized several conferences.

"Metal and Concrete Structures Degradation, Repair Solutions, and International Experiences" was held in February during the "Build Up" trade show in Milan. Attendees included numerous architects, contractors, and engineering firms. Among the many presentations held were the lectures of Professor Tronconi and Professor Gandelli of the University of Milan. Professor Tronconi addressed the relevant patrimony of historical buildings, maintenance costs, and the benefits of repair and restoration. Professor Gandelli, instructed on the structural integrity monitored by a new sensory technique. Furthermore, Jessi Meyer of Cortec® illustrated worldwide experiences utilizing MCI® technology for the repair of bridges, high-speed railway structures, seaports, airports, water reservoirs, and both private and public buildings.

More recently, additional meetings have been organized by PROIND, among them a seminar entitled, "Building the Future". This was in preparation for two major events scheduled next year: "M.A.D.E.", the Milan Architectural Design trade show (Milan, February 5-9, 2008) and "World Congress of Architectural Engineering" (Turin, 2008).

Cortec® is pleased to congratulate Armando Settili, President of PROIND, and his team for their valuable contribution to the promotion of MCI® products in the Italian market.

Cortec® Corporation is a pioneer of environmentally friendly, corrosion protection Vapor phase Corrosion Inhibitors (VpCI™) & Migratory Corrosion Inhibitors (MCI®) technologies for the Packaging, Metalworking, Construction, Electronics, Water Treatment, Oil & Gas and other industries. Headquartered in St. Paul, Minnesota, Cortec® manufactures over 400 products distributed worldwide. ISO 9001 & ISO 14001:2004 Certified.
