## Cortec® Corporation Continues to Show Respect for the Environment!

February 7, 2007

Cortec's global environmental policy includes designing Cortec® products and services to be safe for use, to minimize use of hazardous materials, energy and other resources, and enable recycling or reuse; as well as conducting operations in a manner that prevents pollution and conserves resources.

Cortec's commitment to this policy isn't just for sales of environmental products, but also to actively use the environmental products that it produces.

Cortec® uses its own EcoFilm™ Biodegradable collection bags to separate and dispose of trash and organics. Cortec® also produces its own tradeshow bags using 100% biodegradable EcoWorks® Film, which is produced from bio-based, annually renewable resources.

Cortec® Headquarters currently prints 95% of its materials in-house; all are printed on 100% post consumer recycled paper. Cortec® has further reduced waste by sending materials electronically whenever possible.

Cortec's change to 100% post consumer recycled paper will help to save 480 trees, 168,000 gallons (653,762 liters) of water, 1,440 pounds (653.17 kg) of air pollution and 72 cubic yards (54.59 m³) of landfill space every year! It also saves enough energy to power the average home for 144 months!

Cortec® will continue its good work on furthering this environmental policy to help save the environment.

Cortec® Corporation is a pioneer of environmentally friendly, corrosion protection Vapor phase Corrosion Inhibitors (VpCI™) & Migratory Corrosion Inhibitors (MCI®) technologies for the Packaging, Metalworking, Construction, Electronics, Water Treatment, Oil & Gas and other industries. Headquartered in St. Paul, Minnesota, Cortec® manufactures over 400 products distributed worldwide. ISO 9001 & ISO 14001:2004 Certified.
