## Portable mixer lift stands

Sharpe Mixers has introduced a line of portable mixer lift stands that are fully mobile and allow operators to raise and lower mixers in and out of 200 to 400 gallon tote bins without manual lifting. Featuring a horizontal arm that clears the bin top and reaches inside, the stands come in the ELS Series electric version, powered by a 115 VAC motor with a worm gear drive, and the ALS Series pneumatic version.

## SCADA software

PcVue has announced the release of PcVue 11.1, the latest SCADA by its affiliate, ARC Informatique, which features the monitoring of

geographically distributed assets and IP network devices. The unique design improves

operator effectiveness with powerful data analysis tools and developer efficiency with the latest efficiency and automation of configuration. GEO Map Control, a built-in component for GIS decision making, provides live interactive maps from popular mapping services such as Google and Microsoft.

## Corrosion-resistant materials

KCH Engineered Systems has introduced POLYSTRONG and POLYLAST, two corrosion-resistant, thermoplastic based materials used in the equipment that it manufactures. They are poised to replace traditional fiberglass laminates that are subject to degradation wicking, porosity and UV light penetration. The materials are ideal for degasifiers or aeration towers at municipal drinking water treatment plants where NSF Certification is required.

## Mapping software

Bentley Map SELECT Series 4 brings engineering and geospatial data closer together through improved interoperability with Esri File Geodatabase, Oracle 12c, CityGML, Bing Maps, and hybrid point cloud and vector workflow support.

The system eliminates redundant workflows and provides collaboration between geospatial and engineering standards to better support multi-discipline project teams. Users can connect directly to the Esri File Geodatabase and automatically create and exchange both CAD/engineering standard and GIS compliant files.

## Dewatering, sludge pumps

Allegro Industries offers a complete line of work equipment for use in confined spaces, including four models of AC dewatering and sludge pumps, which offer continuous operation at low water levels and extended dry runs without overheat-

ing the motor. These portable, submersible pumps are excellent for manholes, vaults, construction sites, and all dewatering needs. Watertight

O-ring seals keep the pump's internal parts completely dry, and it delivers up to 43 gallons per minute for rapid dewatering and instant prime.

## Micronutrient blend

Bionetix International, a subsidiary of Cortec Corporation, presents MICRO 14, a new special blend of 14 natural ingredients providing various sources of minerals, vitamins and microbial growth elements. This safe and economical alternative to the use of chemicals is beneficial in stimulating activity in nutrient deficient soils, groundwater or wastewater. The formulation will enhance the speed of the microbial degradation of organic materials in order to provide superior bioremediation.

## Plunger valve

The RIKO Plunger Valve from Rodney Hunt is designed to control the flow of water under pressure while minimizing cavitation and vibration. It is ideal for in-line energy dissipation and free discharge applications and is NSF 61 certified for contact with drinking water. Superior design directs the flow around the inner core with in the valve body.

This balances the pressure within the valve, prevents damaging cavitation and eliminates vibration. The unique plunger, with a high strength ductile iron body with epoxy coating seating profile, creates a drip tight shutoff.

## Sewer rehabilitation robots

ID-TEC offers its Sewer Rehabilitation SERIES base robots, designed to easily detect and fix a

variety of problems in sewer pipelines. The company released its 5th addition to the series, which features heavy grinding, milling and cutting equipment, as well as a powerful 6,000 watt, water driven piston motor. The new robot is able to conduct CCTV inspections, place packers and renovation parts, reinstate laterals, and remove roots and other blockades in 7 inch or larger relined pipelines.
