

NEWS ALERT

Cortec® Corporation & Wood Space Industries Team Up to Offer Specialized Training and Workshops on VpCI™ Technology!

August 23, 2007

Wood Space Industries (WSI) in Anaheim, California is a certified export packager and distributor that has offered Cortec's VpCI™ technology to Defense, Aerospace, Telecommunications, and other exporting industries in California for over 15 years. WSI has taken their expertise and service to the next level by offering full-day training sessions and workshops.

On August 14th and 15th, attendees learned about the technical and practical benefits of utilizing Cortec's VpCI™ technology throughout manufacturing and subsequent shipping. The training included a hands-on workshop on how WSI has achieved zero corrosion claims on all export shipments since upgrading from older technology. Attendees were able to package and crate several electronic cabinets using VpCI-126® Blue and VpCI™ 130-series emitters as well as see the fast-acting rust removers in action.

WSI will offer these sessions throughout the year in response to the growing demand for cost-effective, better performing methods of corrosion control in the high technology industries in California. Cortec® congratulates WSI on their dedication to improving the awareness of VpCI™ technology in the industries they serve and for their devotion to excellence in technology and service.

Cortec® Corporation is a pioneer of environmentally friendly corrosion protection Vapor phase Corrosion Inhibitors (VpCI™) & Migratory Corrosion Inhibitors (MCI®) technologies for the Packaging, Metalworking, Construction, Electronics, Water Treatment, Oil & Gas, and other industries. Headquartered in St. Paul, Minnesota, Cortec® manufactures over 400 products distributed worldwide. ISO 9001 & ISO 14001:2004 Certified.
