

Electronic cleaner inhibits corrosion

From Cortec comes "ElectriCorr VpCI-238/239", an electronic cleaner for multi-metal corrosion protection. It is designed to combat corrosion in complex, sensitive electronic and electrical equipment. The anti-static product displaces moisture and protects aluminium, copper and other non-ferrous and ferrous metals found in electronic applications. It forms a thin, fast-drying, non-sticky film which is effective in highly aggressive and polluted environments, including marine and tropical climates. It does not affect the electrical resistance or magnetic properties of the substrates; and it is safe to use with most plastics and elastomers, even in unvented enclosures.
