KYB-CONMAT offers world-class Concrete Equipments and Material Handling Solutions for Infrastructure and Construction Projects. We have more than 14,000 employees (Consolidated) working in 34 Manufacturing Plants and 62 Offices across 21 countries globally.

CONSTRUCTION EQUIPMENT

- Concrete Batching Plant
- Mobile Concrete Batching Plant
- Concrete Canal Paving Machine
- Concrete Road Paving Machine
- Rack & Pinion Construction Elevator
- Transit Mixer • Concrete Pump

STORAGE SOLUTIONS

- Industrial Storage Systems
- Industrial Automation

High-Tech Protector for Electrical and Electronic Devices Saves Money and Combats Corrosion!

A powerful cleaner from Cortec's EcoSonic® line - Electronic Cleaner / Protector powered by Nano-VpCl® provides instant, long-term, multi-metal corrosion protection. This new high-tech protector is designed to fight destructive effects of corrosion of complex, sensitive electronic and electrical equipment. More importantly, it saves money by reducing labor time, extending product life, and eliminating downtime due to corrosion. As a multi-metal, multi functional outdoor cleaner and corrosion inhibitor it protects vulnerable electrical or electronic components exposed to moisture and other aggressive environments.

EcoSonic® Cleaner is especially intended for protecting outdoor electrical connections and can be applied as a light mist after final assembly or in the field. With moisture-displacing and penetrating film characteristics, it serves as an excellent contact cleaner of oils, grime, and other contaminants.

Cortec's EcoSonic® Cleaner / Protector saves money by extending product life and eliminating downtime due to corrosion on a variety of applications:

- Electrical contacts and components
- Outdoor generators and junction boxes
- Outdoor and indoor electrical outlets
- Electric motors
- Printed circuit boards
- High or low voltage/current electrical and electronic devices such as relays, connectors, sensors, wiring, etc.

The fast drying product leaves behind a very thin non-sticky corrosion inhibiting film proven effective against aggressive conditions including industrial, marine, and tropical environments. The continuous Vapor phase Corrosion Inhibitor action of EcoSonic® Cleaner / Protector offers increased corrosion protection at a lower cost than conventional rust preventives.

Cortec's cleaner/protector does not alter the electrical resistance or magnetic properties of metal substrates

and can be safely applied for protection of electronic circuits or relays without causing any significant changes in conductivity. It can also be used in contact with engineering plastics, elastomers and other non-metals. The spray is CFC, 1,1,1-Trichloroethane as well as nitrites, silicones, and phosphates free.

As an anti-static, multi functional inhibitor it displaces moisture and protects most metals and alloys normally found in electronic applications; such as aluminum, copper, ferrous and other non-ferrous metals.

Cortec's EcoSonic® Cleaner / Protector conforms to NACE Standard 0487-2000, NACE TM 0208-2008, tested according to ASTM D-1748, and ASTM D-5534.) It's approved for US military and NATO use under NSN 6850-01-413-9361. The product is RoHS compliant.

Provide your electronics equipment with best corrosion protection on the market. Whether for layup or active use, EcoSonic® Cleaner/Protector provides an excellent solution to the corrosion that can attack electrical components and cause failure. The results are less downtime, prolonged product life, minimized field service and greater cost savings on electrical and electronic devices.
