Cortec® Corporation's Distributor Conducts Seminar in Finland!

May 8, 2007

Cortec® Corporation is pleased to congratulate Teknoma Oy, our distributor in Finland and Estonia for the successful corrosion seminar they held in Tampere, Finland in February. Twenty one attendees from Finnish companies, the Finnish Air Force, and other International companies participated in the two day seminar. There were presentations given by Mikko Arponene, Rautaruukki Oy Steel Division, Research Centre Raahe (Rautaruukki), and Tuomo Hyvärinen (Sandvik) about the VpCI™ technology in the steel industry and mining heavy duty vehicles.

The seminar focused on Cortec's VpCI™ technology and applications in packaging, electronics, surface preparation, coatings, and water treatment. The goal was to professionally illustrate the characteristics, advantages, and benefits of Cortec's VpCI™ corrosion control solutions. The seminar also offered participants the opportunity to share information concerning their corrosion problems, which often have a very significant financial and environmental impact.

Tampere, a dynamic city, located in the center of the Finnish industrial area was ideal in location for the convenience of attendees traveling from many areas. Tampere's luminous and brisk evenings enticed the group to gather at the famous "Hemmingway's" where business talk was enriched with personal experience.

Cortec® Corporation is a pioneer of environmentally friendly, corrosion protection Vapor phase Corrosion Inhibitors (VpCI™) & Migratory Corrosion Inhibitors (MCI®) technologies for the Packaging, Metalworking, Construction, Electronics, Water Treatment, Oil & Gas and other industries. Headquartered in St. Paul, Minnesota, Cortec® manufactures over 400 products distributed worldwide. ISO 9001 & ISO 14001:2004 Certified.
