Custom Fabricated Equipment Covers and Hoods
Our mission
At EcoCortec® we are continually improving and expanding our facilities, equipment, processes, and ourselves to meet our customer’s needs and expectations for consistent high quality films and bags delivered on time.

EcoCortec® is the most advanced manufacturer of high-tech Vapor phase Corrosion Inhibiting (VpCI®) films and bags in Europe. The plant specializes in manufacturing Cortec®’s innovative Vapor phase Corrosion Inhibitor (VpCI®) films and offers customers complete converting, extruding and printing capabilities. We are continually improving and expanding our facilities, equipment, processes, and ourselves to meet our customer’s needs and expectations for consistent high quality films and bags delivered on time. EcoCortec® manufactures films and bags according to customer specifications in terms of the product size and performance.

EcoCortec® now produces special custom VpCl® film covers/hoods in various sizes and shapes...

Cortec®’s premium shrink films VpCl®-126 and Milcorr® are available as equipment covers in small series. These high strength, high performance covers are designed to replace wooden crates, containers, metal, plastic and wooden boxes. They are light weight thus reducing transportation costs while being non-toxic and recyclable therefore improving carbon footprint of equipment manufacturers.

MilCorr® VpCl® Shrink Film and VpCl®-126 High Performance Film are latest technology heavy duty films featuring Cortec®’s world renown multimetal (VpCl®) Vapor phase Corrosion Inhibitors. They enable strong protection of surfaces against the most powerful elements of nature. These VpCl® equipment covers can be used for protection during outside storage, export shipment or long term mothballing providing safe and cost efficient preservation method. They combine the latest film technology with premium corrosion protection for all multimetals. Both are safe for handling and economical to use by significantly reducing cost of labor and materials for traditional crating.
Metal parts packaged in MilCorr® or VpCl®-126 High Performance Film receive continuous protection against salt air and humid environments, moisture, aggressive industrial atmospheres and dissimilar metal corrosion. The VpCl®’s vaporize and condense to metal surfaces in the enclosed package, reaching every area of the part, even hardest-to-reach interior surfaces. This allows complete product protection during storage as well as during domestic and overseas shipments virtually eliminating any rust claims. These high-tech covers and hoods replace conventional rust preventatives such as oils and desiccants. They eliminate all the degreasing or coating removal required in the past allowing customers money savings.

Equipment protected with MilCorr® or VpCl®-126 Shrink Films can be used immediately without need for cleaning or degreasing. These products are free of amines, nitrites, phosphates, halogens and other toxic chemicals. VpCl® shrink films are offered printed with logos of equipment producers at no extra charge providing brand and counterfeit protection as well as protection against high winds, rain, snow, ice and sand storms. They are economical alternative to crating therefore making it easy for equipment to cross customs check-ups without damaging the integrity of the packaging.

Cortec®’s MilCorr® VpCl® Shrink Film and VpCl-126® High Performance Film conform to military specification MIL-B-22019D, NACE Standard RP0487-2000 and are RoHS compliant.
