VpCI® powders protect metals electrochemically. Corrosive agents attack metals at every opportunity – especially in crevices, cavities and voids where paints and coatings are rendered useless. Now there is a way to defend against corrosion at a molecular level – Vapor phase Corrosion Inhibiting (VpCI®) powders from Cortec® Corporation.

Cortec® VpCI® powders shield metals unlike any other protective substance. Cortec® manufactures VpCI® powders with moderate vapor pressure so they volatilize easily. VpCI® powders sublime directly to a vapor that seals metals with a chemically adsorbed monomolecular film.

What are VpCI® Powders and why are they used?

Immediate results. Constant protection.

VpCI® powders stop the corrosion process electrochemically. Application is easy, with little or no surface preparation required. Cortec® VpCIs even prevent further corrosion of previously corroded, painted or coated surfaces.

Once applied, Cortec® powders protect both ferrous and non-ferrous metals for a minimum of 24 months without deterioration – and no need for regeneration. VpCI® powders are not consumed by the protective action. If the VpCI® layer is disturbed, it replenishes itself automatically with continuous vapor deposition.

When used for short- or long-term storage, the VpCI® layer need not be removed prior to start-up of equipment. However, removal – if necessary – is just as easy as application. Any low pressure air gun or simple water rinse will work.

Cortec® VpCIs are environmentally safe. They do not contain nitrites, silicones, phosphates, heavy metals or other harmful chemicals.

VpCI® powders can be sprayed or blown into cavities or interiors having complex geometries. Certain VpCI® powders are water soluble for wet applications such as hydrotesting. For pumps, heat exchangers, generators and piping, a VpCI® powder solution may be circulated through the system to assure contact with all surfaces. Drying is not necessary.

Powder may also be sprinkled or dispersed into small volumes, but should be fogged with a blower for volumes greater than 36 cubic feet (one cubic meter).

Protect all metals against corrosion.

Cortec® products protect with a thin, monomolecular film. The barrier re-heals and self-replenishes and can combine with other functional properties for added protective capabilities.
VpCI®-307 offers multimetal protection for ferrous and non-ferrous metals including: copper, brass, galvanized steel, aluminum, zinc and cast iron.

VpCI®-308 offers biodegradable and water soluble multimetal protection.

VpCI®-309 is an excellent all-purpose powder for ferrous and stainless steel alloys. With its strong vapor carrying power, it is suitable for protection of tank interiors.

VpCI®-608 is designed to be used in combination with cathodic protection, protecting unprotected or damaged areas, saving electrical energy and prolonging the life of the sacrificial cathode.

VpCI®-609 protects ferrous metals and aluminum. An excellent low cost water soluble powder, VpCI®-609 is optimal for wet and dry lay-up of equipment.

**Exposure Limitations**

1. Enclosed. For use when in non-ventilated equipment housings, tanks, voids, tubular structures, etc.

**Key VpCI® Features:**

- Three-phase protection at the molecular level
- Versatile chemistry allows wet or dry application
- Contains no nitrites, phosphates or silicones
- Unlike desiccants, VpCI® powders do not require regeneration
- Self-replenishing VpCI® technology
- Near neutral pH levels

**Resulting Benefits:**

- One step, durable protection
- Easy application, easy removal
- Safe for the environment
- Cost effective corrosion protection
- Constant protection against all types of corrosion
- Does not increase alkalinity in systems
TOTAL CORROSION CONTROL
Cortec® Corporation is dedicated to controlling corrosion at all stages of a product life cycle. Cortec® Corporation has developed a diverse range of corrosion protection products including cleaners, metalworking fluids, water and oil-based coatings and corrosion inhibitors, rust removers, paint strippers, emitters, powders, packaging foams, paper, films, as well as surface treatments and admixtures for concrete. Contact Cortec® for additional brochures and information.

Products are packaged in fiber drums with a moisture barrier liner. VpCI® powders should be stored in their original containers under dry conditions not exceeding 100°F (38°C).

Visit our website for more information on Cortec® Vapor phase Corrosion Inhibitors.

LIMITED WARRANTY

All statements, technical information and recommendations contained herein are based on tests Cortec® Corporation believes to be reliable, but the accuracy or completeness thereof is not guaranteed. Cortec® Corporation warrants Cortec® products will be free from defects when shipped to customer. Cortec® Corporation’s obligation under this warranty shall be limited to replacement of product that proves to be defective. To obtain replacement product under this warranty, the customer must notify Cortec® Corporation of the claimed defect within six months after shipment of product to customer. All freight charges for replacement product shall be paid by customer. Cortec® Corporation shall have no liability for any injury, loss or damage arising out of the use of or the inability to use the products.

BEFORE USING, USER SHALL DETERMINE THE SUITABILITY OF THE PRODUCT FOR ITS INTENDED USE, AND USER ASSUMES ALL RISK AND LIABILITY WHATSOEVER IN CONNECTION THERE WITH. No representation or recommendation not contained herein shall have any force or effect unless in a written document signed by an officer of Cortec® Corporation.

THE FOREGOING WARRANTY IS EXCLUSIVE AND IN LIEU OF ALL OTHER WARRANTIES, EXPRESS, IMPLIED OR STATUTORY, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTY OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE. IN NO CASE SHALL CORTEC® CORPORATION BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES.
