PRODUCTS

VpCI®-414

PROBLEM

Serck Services needed a solution to clean the internal area of a compressor tank and associated piping, mainly to remove the crude oil sludge without causing any damage to the integrity of the system.

APPLICATION

VpCI®-414 was recommended and lab tests were done to check if the crude oil sludge could dissolve. After the lab tests, the entire system was flushed with VpCI®-414, and after 48 hours of chemical circulation, all the sludge was removed. The cleaning process was completed as per NAS Class 8, and the end client ADCO was satisfied with the performance of the chemical.

CONCLUSION

Cortec® provided an innovative, non-hazardous product that did not damage the integrity of the system while removing the sludge and providing protection against corrosion. Serck Services & ADCO also appreciated the onsite support they received from The Kanoo Group.
