Cortec® at NACE 2009

The 2009 NACE Corrosion Conference and Expo was held in Atlanta, Georgia on March 22-26. This year Cortec® had one presentation at "CO₂/H₂S Corrosion in Wet Hydrocarbons Containing Environments Symposium" by Boris Miskic, Cortec's President/CEO, and three speakers presented laboratory/field work in the technical symposium, "Advances, Novel Applications and Measurement of Vapor Corrosion Inhibitors" chaired by Cortec's own Cliff Cravens. Boris Miskic presented "Effectiveness of the Corrosion Inhibitors for the Petroleum Industry under Various Flow Conditions" co-authored by Margarita Kharshan and Alla Furman. This paper discusses the corrosion inhibitors that can be used successfully with drag reducing components in pipeline applications.

Andrea Hansen addressed "Anti-Corrosion Building Blocks for Open Recirculating Loop Cooling Systems" written by co-authors Alla Furman, Margarita Kharshan, and Elizabeth Austin. This paper showed corrosion data of several VpCI® water treatment products including S-99, VpCI-648, and S-14 Bio collected in lab studies and the pilot cooling tower. The paper "Novel Approach to the Tank Lining Coatings" was discussed by Angel Green (co-authored by Chuck Ludwig, Universal Corrosion Specialists). This paper presented lab data along with real life experience on tanks in Texas using "Conformant" and VpCI-398 to protect tanks holding corrosive substances. The system works better and creates much less VOC than traditional alternatives. Kristy Gillette presented on the paper "Modern Advances in Environmentally Friendly Vapor-Phase Corrosion Inhibiting Coatings: expanding the Realm of VpCI® Packaging Film." The five new VpCI® packaging products covered were VpCI® Anti-Grease Paper, VpCI® Anti-Salt Linerboard, VpCI® Cohesive Film, VpCI® Water Resistant Paper, and VpCI® Masking Film.

We are now submitting abstracts in preparation for NACE 2010!

In this issue:

- ISO 14000 Environmental Management System (EMS) passed its annual audit.
- Packaging World: BioPad®, VpCI-398 Pouch, EcoPouch, and MICoat® Preserves Rocket Launch Pad
- Process Additives: VpCI-457 GL
- Expanding the MICoat® Line: MICoat® Stainless and PTC Emitters

PRESS RELEASE:

Cortec's Free Mothballing Manual: A concise guide of proven solutions to protect assets during storage, lay-up, and mothballing..

Whether you are storing a single gearbox for a few months or shutting down an entire production facility, Cortec® can help preserve your valuable property.

PRODUCT SPOTLIGHTS:

“Summer Up” with Cortec® Corporation’s Bullfrog.

Cortec's Bull Frog products represent a real breakthrough in consumer technology that has been perfected and proven in industrial and military applications around the world.
