 Difference between the Chapter 62-761, F.A.C. requirement and the Alternative Procedure Request: The AP provides corrosion control in the interstices of double steel API's without using Cathodic Protection.

Please write a brief description of the proposed Alternative Procedure. (If you need additional space, please attach a separate sheet):
through the use of a constantly-monitored probe installed between the floors, the precise corrosion rate in mils per year is determined. This rate is then utilized to calculate the remaining safe operating life of the primary floor which is used to calculate the next inspection interval. The calculated interval supersedes the normally-accepted interval per API 653 since it reflects the highest determined corrosion rate.

Section 4

Please provide a brief demonstration of how the proposed procedures, surface waters, or groundwaters of the State versus (see 62-761.700(1)).
