## CORTEC MCI WALL DEFENSE

*Cortec's new MCI Wall Defense is a clear, silicone elastomer-based anti-graffiti coating that can be applied to exterior concrete, masonry, or metal surfaces. MCI Wall Defense is designed to be used over various types of coated or uncoated surfaces. Any graffiti can be immediately removed with a cold water pressure cleaning. Since the coating is permanent, there is no need to reapply after graffiti removal like alternative sacrificial systems. The product is an ideal choice for protecting the nation's roadways, bridges, railcars, and other spaces from painted vandalism. ## Offshore Fireproofing with Pyroclad®X1

Carboline Co. (St. Louis, Missouri), a manufacturer of coatings, linings, and fireproofing products, announced that it has officially released Pyroclad X1, the latest breakthrough in offshore fireproofing technology. This epoxy intumescent fireproofing product is a two-component, solvent-free coating designed to provide both jet fire and hydrocarbon pool fire protection for oil and gas installations. This innovative epoxy intumescent system can withstand the harsh environmental conditions of

coastal and offshore environments as it has successfully passed the Norsok M-501 environmental test program without a topcoat. Phone: 1 888-227-2654, Web site: [www.carboline.com](http://www.carboline.com).

## New Mighty Scope Connect Shares Wirelessly with Tablets and Phones

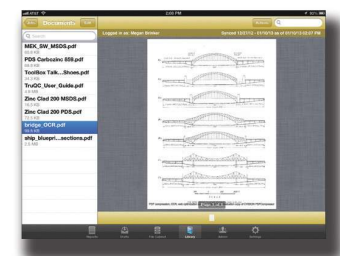

Aven, Inc. (Ann Arbor, Michigan) brings wireless networking to portable microscopy with the advanced Mighty Scope Connect. This handheld scope can display magnified images and video on three tablets or smart phones simultaneously. By serving as a wi-fi "hotspot" with a range of ~30 ft (9 m), the Mighty Scope Connect eliminates the need for an Internet connection or wireless network access. This allows joint use for scientific or

forensic field work at any location. Phone +1 734-973-0099, Web site: [www.aventools.com/sales-info.html](http://www.aventools.com/sales-info.html).

## TruQC Releases Version 2.0 of Its Job-Site Quality Control App

TruQC LLC, a St. Louis-based startup that has developed a cloud-based job-site documentation and quality control app, recently announced Version 2.0 of its product. TruQC has listed many new updates with Version 2.0 but is naming the document library addition as the single most significant new feature. The document library allows users to remotely manage field employee access to job-specific documents like MSDS, PDS, blueprints, scopes of work, contracts,

employee certifications, equipment user manuals, and more. Phone: +1 314-681-2558, Web site: [www.truqcapp.com](http://www.truqcapp.com).
