## Cortec® & Bionetix® Featured Side by Side in The Analyst's Summer Issue!

Cortec® and subsidiary Bionetix® International were featured side by side in the Summer 2017 issue of The Analyst. This important magazine is published and self-described by AWT (Association of Water Technologies) as “The voice of the water treatment industry.” Cortec® and Bionetix® are both highlighted in the “Industry Notes” section for their roles in the organic corrosion inhibitor market and wastewater treatment/bioremediation field.

The magazine announces the naming of Cortec® as a top player in the global organic corrosion inhibitor market in a recent report by Fior Markets. The Fior report focused particularly on the global market in North America, China, Europe, Southeast Asia, Japan, and India from 2012 to 2017 and forecast into 2022. The Analyst notes Cortec’s excitement about the report following decades of hard work, expertise, and innovation. It also relays Cortec’s goal to continually improve and make many more contributions to the market in coming years.

Directly across from this article, The Analyst mentions the natural wastewater and soil bioremediation tool kit of Bionetix® International. The column describes how Bionetix® uses microorganisms, biosurfactants, and biostimulants to help speed up the degradation of soil and wastewater pollutants. In particular, this column highlights Macro N/P, “a free-flowing powder with the optimal 5:1 nitrogen/phosphorus ratio for nourishing helpful bacteria in wastewater.” It explains how important nutrition is to waste bioremediation because it supplies necessary nutrients for encouraging growth and metabolic activity of helpful organisms. Nitrogen and phosphorus are often deficient in wastewater and soil, so Macro N/P helps make up that deficiency and stimulate the bioremediation cycle.

With its strong emphasis on environmental friendliness, Cortec® is especially pleased that this leading water industry magazine has chosen to highlight Cortec’s leadership in organic corrosion inhibitors and Bionetix® International’s efforts in the field of bioremediation.

Cortec® Corporation is the global leader in innovative, environmentally responsible VpCI® and MCI® corrosion control technologies for the Packaging, Metalworking, Construction, Electronics, Water Treatment, Oil & Gas, and other industries. Headquartered in St. Paul, Minnesota, Cortec® manufactures over 400 products distributed worldwide. ISO 9001 and ISO 14001 Certified, and ISO 17025 Accredited.
