

Nantan Meteorite over 4.5 billion years old protected with Cortec VpCI-286

Bill Mason of Uncommon Conglomerates presents an award for a job well done to Cortec Corporation. For those more curious, the Nanten Meteorite was found in 1958 around Guangxi, China and is composed of almost pure iron with small amounts of titanium. Cortec VpCI-286 is very effective in preventing oxidation and corrosion of an otherwise very susceptible Nantan Meteorite.
