PRODUCT NEWS RELEASE

Cortec® Corporation Provides Universal Corrosion Protection With VpCI™-325.

Cortec® Corporation's VpCI™-325 is a safe, convenient, ready-to-use, vegetable oil/solvent-based liquid for use in a wide variety of applications. This biodegradable oil based product provides an outstanding replacement for products containing petroleum distillates. VpCI™-325 provides excellent lubrication for metal parts while providing unequalled corrosion protection. Suggested uses of this general-purpose lubricant and rust preventative include cleaning, lubrication, and protection of machined parts, firearms, wire, sheet metal, hinges, flanges, pipes, and a host of other products. Testing shows VpCI™-325 provides excellent protection in high humidity and in the presence of corrosive elements, such as chlorides, hydrogen sulfide, and other sulfur compounds.

VpCI™-325 is a biodegradable oil based product that provides an outstanding replacement for products containing petroleum distillates. Results of salt spray test ASTB117.

Cortec's VpCI™-325 protects in two ways; first, oil-soluble safe corrosion inhibitors forms a tenacious film that clings to metal surfaces; second, Vapor phase Corrosion Inhibitors (VpCI™) are released into the air above the oil. These vapors condense and penetrate to form a protective barrier on surfaces not contacted by the liquid product. The combined action provides complete protection for systems internal parts. VpCI™-325 provides complete water displacement from metal surfaces which prevent corrosion and eliminate moisture-induced short circuits.
