

MCI[®] Technology Presented to Major Companies in Southeast European Market!

One of our mission in Cortec[®] Corporation is to continually educate new markets on our technologies and services. Last week our team was present in Albania where in collaboration with Croatian Embassy in Tirana we have presented Cortec's world renown MCI[®] technology. Migrating Corrosion Inhibitor technology protects reinforcing metal in concrete from corrosion, therefore Albania excellent is an market because of its high intensity construction work.

Among numerous companies, our team has presented MCI[®] technology to key people in major port authority, Durres. Durres port is currently in the phase of designing four new port terminals.

During few days of our visit we have met and talked with more that 10 major Albanian construction, engineering and ready-mix companies as well as Albanian major port authority, Durres. Many of the company owners have also invited their partners to be present. Albania is the country facing countless construction projects as the country's infrastructure is in high expansion period.

Cortec[®] and EcoCortec[®] teamed up with Croatian Embassy in Tirana with the goal to promote its technology and solutions in South East Europe.

Through Croatian Embassy, Cortec[®] was connected with CroTeam - organization working to connect Croatian and Albanian companies. Their director, Adem Zenuni has welcomed us and introduced us to key people and decision makers from the industry. Everyone from state owned to private companies has expressed interest in MCI[®] technology that is yet quite unknown in this part of the world. Another benefit for placing our products on this market is connection of Albanian market with Macedonia and Kosovo. Almost all companies that we have talked to work in all three markets.

ortec

One of the plans for the future is to organize a session of educational workshops for potentials clients to teach them about technology and different applications. This was suggested from company leaders as an educational tool for engineers. We have also discussed entering few current projects such as construction of 4 new port terminals, green corridor highway, (Albanian part) from Tirana to Montenegro border as well hotel buildings. We are happy to say that collaboration with Croatian Embassy was very successful

and might be a great model of cooperation in other countries as well.
