PRESS RELEASE

Attention Formulators: Get Ready to Unleash Nature's Microscopic Cleanup Crew!

Are your customers tired of harsh cleaning chemicals? Are they demanding safer, gentler products that are just as powerful as before? While it can be easy to feel helpless trying to create effective new “green” cleaning products minus the strength of traditional cleaning chemicals, it is not hopeless. With quality biological cleaning additives and concentrates on the market, it is possible to keep the R&D creativity flowing in multiple directions by harnessing the efficiency of nature’s microscopic cleanup crew!

The Biological Power of ABC 4000™

Like other biological cleaners, [ABC 4000™](#) from [Bionetix® International](#) is powered by beneficial bacteria (think probiotics) that produce targeted enzymes to digest a variety of organic material, such as greases, oils, starches, proteins, and cellulose. As the multiple spore blends in this ready-to-use

liquid concentrate activate, they begin to biodegrade grease and grime, making it easy to rinse away unwanted materials and remove the source of odors. Thanks to the wide variety of enzymes produced, ABC 4000™ can be used as the base culture for a broad range of cleaning products for both hard surfaces, fabric, and more:

- Carpet and fabric cleaners
- Bathroom cleaners
- Hard surface cleaners
- Drain, grease trap, and wastewater maintenance treatments (where permitted)

Good Things Come in Small Packages

As a liquid concentrate with a high bacterial count, ABC 4000™ packs powerful cleaning capabilities into a small space to save inventory and shipping costs, making it a dynamic foundation for (or addition to) multiple cleaning and odor control formulations at an economical price. It is effective in formulations from pH 6 to 9; stable up to 104 °F (40 °C) in final blends; and compatible with non-ionic and mild anionic surfactants. A little goes a long way toward designing your next groundbreaking cleaning product or simple everyday surface cleaner that keeps a facility looking fresh.

A New Approach to Facility Maintenance

Today's market is looking for "greener" solutions that cut down on harsh chemicals while still providing the necessary hygienic action to keep floors, carpets, bathrooms, and upholstery clean and odor free. Biological concentrates like ABC 4000™ open a world of possibilities for

formulators to achieve that goal and usher in a new era of effective, eco-conscious cleanliness.

[Contact Bionetix® to learn more about ABC 4000™ and other biological cleaning additives to power your next formulation.](#)
