

# NEWS ALERT

## BIO-BOOM™ TAB Takes the Spotlight at WWETT 2025

# Bionetix

The WWETT convention is a great place to get immersed in the world of wastewater and environmental services, as our Bionetix® team learned firsthand during the February 18<sup>th</sup>-20<sup>th</sup> convention in Indianapolis. With new and familiar faces coming from as far as Mexico, Peru, Colombia, Chile, and the Netherlands, it was an exciting time to explore future possibilities for international collaboration and see the new [BIO-BOOM™](#) TAB take the spotlight!

While companies are still waking up to the exciting possibilities of friendlier, more sustainable biological treatments such as those in the BIO-BOOM™ product line, our new tablet version, released in December, was of special interest to companies that service portable toilets in winter environments. Portable restroom operators may have to wait up to five minutes for one portable toilet treatment pouch to dissolve in low temperatures, a loss of time that can add up to serious delays on the treatment route. While liquid treatments are a faster alternative, their downside is the lack of portion control, which may lead to excessive use and unnecessary waste. In contrast, our Bionetix® team showed how BIO-BOOM™ TAB, the only tablet of its kind, was able to dissolve in ice water at the booth. This fast-dissolving technology also gives users the benefits of precise and controlled dosing, enabling service companies to increase efficiency on their routes.

The eager reception of the BIO-BOOM™ TAB underscores the leadership and growing traction of Bionetix® as an innovative manufacturer of biological treatments, and we anticipate seeing potential future collaborations unfold from the connections made at WWETT 2025. Together, we look forward to making the job safer and easier for portable toilet service companies! [Contact us to learn more about this and other biological treatments presented at WWETT.](#)
