PRODUCT NEWS RELEASE

Cortec® Corporations BioLube™ Replaces Petroleum Based Lubricants.

Cortec® Corporations BioLube™ All Purpose Lubricant is the latest in Cortec's line of biodegradable products derived from soybeans. This bio-based formula can directly replace traditional petroleum based lubricants. It combines our unique Vapor phase Corrosion Inhibitor (VpCI™) technology and a superior lubricating package designed with the latest in friction modifiers and extreme pressure additives. Metal seeking molecules provide multi-metal corrosion protection, sealing against moisture and air. BioLube™ penetrates rapidly, displaces moisture, provides complete corrosion protection for up to a year, and contains no CFCs, which deplete the ozone, making BioLube™ a more environmentally responsible choice.

When compared to conventional lubricating products, BioLube™ offers superior corrosion protection, is biodegradable, and safe to use. It is recommended for use in a wide variety of applications including mold release, a general-purpose lubricant, and preservative oil for corrosion prevention. In addition, the nature of the soybean oil used to formulate BioLube™ gives it excellent penetrating properties, useful in loosening frozen nuts and bolts. BioLube™ can be used for industrial, shop, or home use; it can be used indoors or outdoors and will not harm most plastics.

Cortec® Corporations BioLube™ bio-based formula eliminates hazards while reducing our dependency on foreign oil. It offers a cost competitive alternative to conventional petroleum-based products and synthetic alternatives. Cortec's award winning technology and chemical corrosion preventatives are the reason why Cortec® is known worldwide as being dedicated to the prevention of corrosion damage, cost effectiveness, and the environment.
