LOCATION
Ohio, USA

CUSTOMER
Private Homeowner

PRODUCT
ECO-SEPT™ Powder

PROBLEM

Good septic maintenance includes periodically inspecting and pumping waste out of tanks. Five years ago, the customer completely pumped out his 400 liter (1500 gallon) septic tank at a total cost of \$430 USD. This procedure usually needs to be done every two years.

APPLICATION

The customer also started rigorously applying ECO-SEPT™ five years ago. This was as easy as flushing one 28 gram (1 ounce) water-soluble ECO-SEPT™ pouch down the toilet every month for five years. ECO-SEPT™ contains a diverse microbiology designed to activate biodegradation of solid waste. It reduces solids in septic tanks, works to improve pipe purification, extends the life of a drain area, and helps to control methane production.

CONCLUSION

Since the ECO-SEPT™ application started, the septic tank has passed all inspections, and no pumping has been required. For a small fraction of the cost of pumping, the homeowner has been able to save several hundreds of dollars on routine maintenance costs.

A private homeowner paid \$430 USD to have his 400 liter (1500 gallon) septic tank pumped out, a common procedure usually required every two years. The homeowner then began to flush an ECO-SEPT™ pouch down the toilet monthly for the next five years. These small 28 gram (1 ounce) water-soluble pouches contain a diverse microbiology designed to activate biodegradation of solid waste and reduce solids in septic tanks. At the end of five years, the septic tank had passed all inspections and had not required any pumping, saving the homeowner several hundreds of dollars at a small fraction of the pumping cost.
