PRESS RELEASE

New Website Showcases Quality, Environmental Responsibility at Cortec® Coated Products!

Cortec® Corporation has launched a complete redesign of its Cortec® Coated Products (CCP) website! The new website has a clean, fresh look and is easy to navigate. It is an excellent resource for learning about what Cortec® has to offer in terms of metals protection, moisture barrier packaging, and custom paper coating at its plant in Eau Claire, Wisconsin!

Top Quality Corrosion Protection

The new website identifies CCP's main focus: manufacturing top-of-the-line VCI (vapor corrosion inhibitor) papers under the VpCI® brand name—a distinguishing mark of quality in the VCI packaging

world. CCP is the industry's most dependable source for VCI coated paper products for superior corrosion protection of both ferrous and non-ferrous metal.

Made from high quality neutral natural kraft paper, CCP paper products do not contain fluorochemicals, nitrites, phosphates, silicones, chromates, or other heavy metals. CCP ensures quality by overseeing the entire process—from the manufacture of its VpCI® coating solution at Cortec's Saint Paul, Minnesota, headquarters, to VpCI® coatings application at CCP and quality assurance testing to ensure product specifications are met.

CCP's "Products" webpage explains how easy it is to use VpCI® papers by interleaving or wrapping parts so there is no free airflow. VpCI® molecules in the paper coating vaporize and condense on the metal surfaces of parts or equipment, forming a protective molecular layer that naturally floats away when the components are unpackaged, leaving them corrosion free and ready to use or assemble. The "Products" page showcases CCP's range of standard and custom coated paper products, from basic CorShield® VpCI®-146 Paper to VpCI® linerboard and much more!

Environmental Responsibility

The new website also spotlights CCP's strong emphasis on environmental responsibility, both in its products and processes. This includes CCP's advancements in developing fully recyclable/repulpable moisture barrier papers that offer excellent alternatives to polyethylene and wax papers. CCP's barrier coating can be combined with VCI protection to make dual corrosion inhibiting, moisture barrier paper, such as EcoShield® VpCI®-144—or it can be used standalone to make plain repulpable moisture resistant packaging paper or linerboard, such as EcoShield® Barrier Paper. Several CCP papers have also earned the USDA Certified Biobased Product label, allowing them to display a unique USDA label that highlights their percentages of biobased content.

Visitors to the website can click on the “About Us” tab to learn more about CCP’s participation in the Wisconsin Green Tier Program, which CCP joined in 2010. With the maintenance of an Environmental Management System (EMS), CCP has shown superior environmental performance over the years while cutting costs and reducing impact on the environment. The website includes a list of highlights such as waste diversion, heat recovery, and energy efficient lighting.

Custom Coating and Conversion Services

While CCP’s main focus is to provide high-quality, environmentally responsible anti-corrosion packaging options, the website also notes CCP’s flexibility to serve other paper coating and conversion needs. As a wide web, custom coater of flexible substrates (roll widths up to 100” [2.54 m]), CCP develops materials and offers services that customers cannot find elsewhere and is prepared to work directly with customers on process and product development.

Browse the new website to learn more about what CCP can do for your coated paper needs:
