

HIGH PERFORMANCE VpCI® PACKAGING

CASE HISTORY SPOTLIGHT

Case History #204: Preservation of Competition Firearms

CASE HISTORY

VpCI™-146 & VpCI™-325

PROBLEM
Armi Perazzi manufactures guns, some of which were used in the '96 Olympics in Atlanta, Georgia. They needed to protect their high quality game and competition guns from corrosion during storage and international shipment for up to six months. Previously, the guns were protected with mineral oil, grease and silica gel.

APPLICATION
Cortec® VpCI™-325 was applied to the trigger device of the guns for lubrication and protection. Then, the guns were wrapped in Cortec® VpCI™-146 paper before storage and shipment.

CONCLUSION
Cortec® products offered environmentally friendly, easy-to-use protection to Armi Perazzi's guns. During the three month test period, Cortec® VpCI™-325 and Cortec® VpCI™-146 provided effective protection during transport.

ch204 2/2007 (1/1998)

In 1997, a manufacturer of guns used in the 1996 Olympic Games was looking for a new way to protect their high quality game and competition firearms from corrosion for up to six months in storage and international shipment. They had previously been using mineral oil, silica gel, and grease to protect the guns. This time, they decided to try Cortec® solutions. They applied VpCI®-325 for lubrication and protection of trigger devices and then wrapped the guns in CorShield® VpCI®-146 Paper. These products provided effective protection in transit during the three-month test period and served as an environmentally responsible, easy-to-use corrosion solution.
