

MICRO-CORROSION INHIBITING COATINGS POWERED BY NANO VPCI®

CASE HISTORY SPOTLIGHT

Case History #400: Dry Component Preservation

A foundry in India wanted to keep components dry, clean, and rust-free so they could be used without further cleaning. VpCI®-369N5 was applied for corrosion protection during the raw material and WIP (work-in-progress) stages. After machining, the parts were cleaned with a solution of VpCI®-419 and then coated with VpCI®-378 dry film rust preventative. The final step was to package them with VpCI®-146 Paper. The solution resulted in happy customers that were receiving the parts clean, dry, and ready to use.
