

CASE HISTORY SPOTLIGHT

Cortec® Case History #492: Accessible Preservation of Pump Skids

A customer in Saudi Arabia needed to protect the pumps, motors, and control systems of 20 new pump skids in a harsh storage environment of fluctuating temperatures up to 122 °F (50 °C), with 90% humidity and fine blowing sand in the region. The skids also needed to remain accessible for maintenance personnel.

The solution was to fog internal voids with VpCI®-337, apply VpCI®-368 coating on machine surfaces, place VpCI®-111 Emitters in control panels, and lay Desicorr® VpCI® Pouches on the skid floors. Finally, each skid was shrink-wrapped in VpCI®-126 HP UV film with special access doors and weather-tight vents installed, leaving the customer pleased with the innovative storage solution and professional service.
