

Case History Spotlight #536: Croatian Overpass Preservation

An overpass in Croatia needed a facelift along with future corrosion protection. After cleaning the surface, workers applied [MCI®-2020 Powder](#) (mixed with water), followed by [MCI® Architectural Coating*](#) RAL 7035 (gray) once the MCI®-2020 had dried. Both materials offered corrosion protection, while the final coating left the bridge with a more finished appearance in the natural landscape.
