CASE HISTORY SPOTLIGHT

Case History #584: MilCorr® VpCI® Shrink Film Protects in Harsh Outdoor Environment of Qatar!

Preserving equipment from corrosion during outdoor storage is a major challenge, especially in a Middle East environment with fluctuating temperatures as high as 50 °C (122 °F) with 90% relative humidity and fine blowing sand. This was the situation in Qatar, where a client needed two-year preservation of a large cooling unit, supporting sub tanks, smaller units, pipes, and flanges.

While unit internals were protected with DesiCorr® VpCI® Pouches and EcoPouches to absorb moisture and/or inhibit corrosion, MilCorr® VpCI® Shrink Film was used to protect equipment externals. This provided an excellent corrosion inhibiting and tough physical barrier against the elements. The preservation system showed good results, and the customer was very pleased with the solution!
