### **NEW PRODUCT RELEASE**

#### **New Bio Pouch Dispenses Powders and Liquids In Water Soluble Bags and Sachets.**

Cortec® EcoSol™ Bio Pouch provides a convenient delivery package for powders and non-aqueous liquids that dissolves immediately in water solutions. The EcoSol™ Bio Pouch becomes a harmless, non-toxic aqueous solution of polyvinyl alcohol. It is readily biodegradable and converts to carbon dioxide and water within 30 days.

EcoSol™ Bio Pouches can be used for a wide variety of applications where environmental and safer usage of chemicals are desirable. The pouches eliminate the need for direct handling of chemical for measuring dosages and for dispensing into solution.

In addition to making chemical handling safer, they improve the accuracy of proper chemical dosages enabling better chemical performance at more economical concentrations.

The new pouches are available in a variety of sizes from a small sachet up to a 30 gallon bag with a 1.5 mils thickness. They offer excellent mechanical properties for tensile strength, tear strength and puncture resistance. Because of their excellent resistance to solvents, the pouches can be used for a variety of non-aqueous liquids. For packaging requirements, the bags can be heat sealed with standard equipment and printed using conventional inks.

In addition to enhancing dispensing methods for cleaners, detergents, and degreasers, EcoSol™ Bio Pouches offer a better and more environmental solution for laundry bags in institutions and hospitals, disposable cases in cosmetics, and dispensing pouches for pigments and concrete additives. For areas such as biocides, water treatment products, fertilizers and agricultural products, EcoSol™ Bio Pouches offer a less hazardous method of delivery and one that is more consistent with the environmental focus spotlighting these areas.
