PRODUCT NEWS RELEASE

Export Packaging Protects Metal Parts During Overseas Shipment and Land Storage

Cortec® Export Packaging saves time and money for multi-national OEMs manufacturing and then shipping metal components from several locations around the world to assembly plants in different countries. Utilizing the latest Green Technology with Cortec® Patented VpCI™ Vapor phase Corrosion Inhibition, multi-metal components are protected during shipment and storage for up to 2 years. The new advancements in Cortec VpCI™ technology enable components, assemblies and entire machines with electronics to withstand the rigors of corrosive attack from humidity, freeze thaw cycles, and aggressive salt environments.

Metal Components

While protecting components during storage and transit, Cortec® Export Packaging speeds processing through customs. The environmentally friendly packaging is available in both recyclable and degradable materials to meet import/export standards. Further, its translucent characteristics allow easy visual inspection. In addition to savings from disposal costs, the packaging minimizes rejects due to corrosion and rust claims. When packaging is imprinted with OEM Branding and Product Codes, receiving and assembly departments can quickly expedite parts. The tamper proof packaging verifies the contents as a genuine, OEM component.

**Multi-metal
Engine Block Assembly**

Components protected with Cortec® Export Packaging receive clean protection. They are ready for immediate use without any cleaning or degreasing. The user simply opens the package and the component is ready for service or further assembly. Cortec® Export Packaging is available in a variety of thicknesses, sheets and bags to accommodate diverse size requirements from small components to engines up to entire machines.
