**PRESS RELEASE**

## **Clean Greener This Summer with BIO-ECO-WASH™!**

Summertime means more people are outdoors, enjoying nice weather at the lake, in the campgrounds, or on the patio. It also means outdoor cleaning opportunities abound—from car washes to routine boat maintenance. Whatever the case, outdoor vehicle and equipment washing raises the question of how to do the job with the least pollution possible.

For sensitive environments, [BIO-ECO-WASH™](#) holds an important answer to cleaning away grease and grime safely and effectively this summer.

### **Why Is BIO-ECO-WASH™ a Lower-Impact Cleaning Alternative?**

BIO-ECO-WASH™ combines readily biodegradable surfactants with beneficial microorganisms to provide effective cleaning while supporting environmentally responsible maintenance practices. The surfactants rapidly loosen and emulsify oils, greases, and organic deposits, while the microorganisms help biodegrade residual organic matter that remains on treated surfaces or enters wastewater

systems. This dual-action approach can help reduce the accumulation of organic residues while minimizing reliance on harsher cleaning chemistries.

### Where Can BIO-ECO-WASH™ Be Used?

BIO-ECO-WASH™ is a great choice for summer cleaning activities in sensitive areas such as marine environments or anywhere users need to be careful about wastewater content. It efficiently removes oils, grease, mineral deposits, and organic residues in a

variety of applications, from industrial to recreational:

- Fleet maintenance
- Yacht cleaning
- Municipal waterfront infrastructure
- Fuel dock cleaning
- Equipment wash bays
- Private boat and camper upkeep
- Dock and bollard cleaning
- Restroom custodial activities

Summer comes and goes quickly with many opportunities for outdoor cleaning. Now is the time to take advantage of nice weather and tackle cleaning jobs in sensitive environments with the help of BIO-ECO-WASH™ for low-environmental-impact cleaning/degreasing power.
