

## Gaco Western Launches the Next Generation of High Solids Silicone Coatings

GacoFlex S2100 White is the only cleanable, solvent-free, 100 percent silicone coating in the industry to resist dirt pick up, even after years of exposure.

In tests, S2100 showed 40 percent less dirt accumulation and two times the whiteness retention, plus it maintained a higher solar reflectance and thermal emittance than competitive silicone coatings. This product does not contain crystalline silica; it contains 37 percent recycled content — the highest in the industry. In addition, the use of S2100 on a job may contribute to Leadership in Energy and Environmental Design (LEED) points. Their 5-Year Brightness Warranty guarantees that properly applied S2100 will maintain its brightness and color uniformity for a period of five years — even over asphalt roofs. “All of our silicone coatings offer long-term durability, but it can be a natural characteristic of conventional silicone roofs to darken and accumulate dirt over time. That is why we developed S2100. It is the first high-solids silicone to resist dirt pick up and offer years of exceptional clean-ability and whiteness retention,” said Chuck Skalski, VP Sales, GacoFlex Coatings. For more information, contact: Gaco Western, (800) 456-4226, [www.gaco.com](http://www.gaco.com)

## EDCO Introduces the 14" Compact Saw (Model KL-14)

Equipment Development Co., Inc. (EDCO) condensed its proven “Rental Tough” saw features into a new 3 ft. x 1.5 ft. (0.9 m x 0.5 m) footprint. These existing features include:

- Heavy-duty box frame construction;
- Laser-fabricated thick steel material;

- Precision-machined arbor assembly;
- Easy-use hand wheel depth control.

With its specifically designed collapsible handlebar, the KL-14 easily fits under shelving for storage. Other features include:

- Mist system for wet cutting;
- Heavy steel blade guard for added safety;

- Easy access belts and bearings for fast maintenance;
- EDCO’s popular Quick Response Code Decal for anytime video training and information via mobile devices.

The KL-14 has a 14" (10.2 cm) blade capacity and is ideal for short-

run cutting applications like creating contraction joints, asphalt patch repair, and trenching. For more information, contact: EDCO, [www.edcoinc.com](http://www.edcoinc.com)

## Cortec’s New VpCI-280: Fast-Drying Topcoat You Won’t Have to Wait For!

Cortec Corporation, the global leader in innovative corrosion protection solutions, is now offering VpCI-280, a fast-drying, solvent-based, alkyd topcoat that is sure to put the finishing touch on any product or project. VpCI-280 has excellent ultraviolet (UV) resistance, which allows for great color and gloss retention, and it can even be matched to most custom colors!

Cortec’s VpCI-280 fast-drying

topcoat was created to help you quickly protect your assets with an innovative corrosion protection solution where the main focus is time management. When applying coatings in unsheltered areas where wind, weather, and bugs are a concern, the dry time becomes extremely important. VpCI-280 was developed as a versatile, industrial finishing enamel for manufacturers of metal products. This enamel offers a quick dry time, high gloss, and good color and gloss retention. It is ideal for industrial original equipment manufacturer (OEM) uses, including agricultural and construction equipment. Regulatory benefits include very low levels of volatile organic compounds (VOCs) and hazardous air pollutant solvents. This one-coat system can be applied DTM (direct to metal) and provides protection in harsh, outdoor, unsheltered applications. The complex mixture of non-toxic, organic inhibitors offers protection that competes with most paints and zinc-rich primers. VpCI-280 is available in 5-gallon (19 L) pails, 55-gallon (208 L) metal drums, liquid totes, and bulk. For more information, contact: Cortec Corporation, [www.cortecvci.com](http://www.cortecvci.com)
