

NEWS ALERT

New Information Sheets Offer Handy Guides to Popular Cortec® Coatings

Cortec® has released several new coatings information sheets that—like the coatings they feature—are effective and easy to use!

The first one-page handout highlights several Cortec® removable coatings that serve as convenient replacements to COSMOLINE® and Tectyl®.* Options include solvent-, oil-, and water-based coatings that can be applied for storage and transit protection and easily removed using alkaline cleaners.

The second handout features VpCI®-391, one of Cortec's most popular removable coatings that dries to a thin, clear film that is virtually unnoticeable, while protecting both painted and unpainted surfaces from corrosion.

The third information sheet introduces an excellent easy-to-use alternative to blasting on rusty surfaces. CorrVerter® Rust Primer allows end users to eliminate the blast and coat the rust with a passivating primer. CorrVerter® can be topcoated with water- or solvent-based topcoats including urethanes, epoxies, acrylics, and alkyds. It provides excellent 5B adhesion with VpCI®-395 urethane topcoat.
