

New Spill Kits Include Surface Treatment

Oil Eater has introduced all-in-one, professional-grade spill kits designed to contain and clean up hazardous spills in manufacturing and other settings as required by Occupational Safety and Health Administration (OSHA) and the Environmental Protection Agency (EPA). A bonus 5-gallon (19 L) bucket of Oil Eater Original cleaner is included in each kit to clean surfaces after the spill has been absorbed. It is waterborne, non-toxic, non-corrosive, non-flammable, and biodegradable. Kits are available in 65-gallon (246 L) and 95-gallon (360 L) overpacks that can handle the corresponding volume of liquid. The kits also contains absorbent pads, pillows, universal snakes, booms, protective gloves, oil-resistant high temperature disposal bags, and an emergency response instruction guide. Jetstream's High-Horsepower, High-Flow Units

Jetstream of Houston, LLP, a manufacturer of industrial high-pressure waterblasting equipment, parts, and accessories, introduces two new high-horsepower, high-flow waterblasting units: the Jetstream 6000 Series 600 hp waterblaster and the Jetstream dual-pump 650 hp waterblaster. Designed for high-flow applications, the new Jetstream 6000 Series waterblaster delivers output from 61.4 gpm (232.4 lpm) at 15,000 psi (103 MPa) up to 116.3 gpm (440.2 lpm) at 8,000 psi (55 MPa). The standard Jetstream UNx fluid end allows flexibility in the field and results in reduced maintenance downtime. The engine-driven charge pump ensures the fluid end receives water at the correct pressure, regardless of the supply conditions. "While it is the most compact waterblaster in the industry, the 600 hp waterblaster delivers the kind of impressive power and performance our customers have come to expect from Jetstream," said Anthony Washington, product manager at Jetstream. For more information, contact: Jetstream, (800) 231-8192, www.waterblast.com

Extend the Service Life of Concrete Structures to a Maximum

Cortec's MCI 2020 is an organic, surface-applied, migrating corrosion inhibitor designed to penetrate through cementitious materials including concrete, mortar, and limestone. It migrates in both liquid and vapor (gas) phases through the pore structure, forming a protective, molecular layer on embedded reinforcement and allowing vapor diffusion. MCI 2020 provides strong corrosion protection against carbonation, chlorides, and other contaminants and will migrate independent of orientation (horizontal, vertical, or overhead up to 8 cm or 3 inches) in 30 days. MCI 2020 can be applied to new concrete or used for rehabilitation, and it will not delay construction or increase costs. MCI 2020 is recommended for preventative maintenance of existing reinforced, precast, prestressed, post-tensioned, or marine concrete structures, bridges, highways, and industrial floors exposed to aggressive environments (chemicals, de-icing salts, carbonation, and atmospheric attack), parking garages, concrete piers, dams, offshore platforms, piles, pillars, pipes, utility poles, cooling towers, and concrete potable water structures. For more information, contact: Cortec, (800) 426-7832, www.cortecvci.com **CP**

**DON'T LET
FLOOR
PREPARATION
PUT YOU
AGAINST THE
WALL**

Aurand has a variety of tools that will allow you to get into areas that other larger machines cannot reach. Each of these "Tough Guys" feature the same quality and attention to detail that has made AURAND famous. Aurand can supply tools for a special hard to reach area, or for the whole area. Tool width varies from 5 to 12 inches. Tools are available in electric or pneumatic models. The AUR-GW1 is gasoline powered, for use where no power is available. Selected models are available with vacuum attachments.
