## **Cortec® Corporation Introduces Cor-Pak® Fabric LD: A New Soldier Against Corrosion.**

Cortec® Corporation's Cor-Pak® Fabric LD is a strong, wet laid, non-woven fabric composed of a combination of synthetic fibers, cellulosic fibers, and Cortec's Vapor phase Corrosion Inhibitor (VpCI™) technology. It is tear-resistant, 100% recyclable, non-toxic, and environmentally friendly. Cor-Pak® Fabric LD can be used in a variety of applications including export and domestic packaging of equipment, electronic components, steel coils, heavy equipment, flat stack covers, pallet shrouds, and precision scientific equipment.

In addition to providing outstanding corrosion protection, Cor-Pak® Fabric LD offers mechanical protection against scratching, abrasion, and staining that can occur in normal packaging applications. It also offers moisture wicking properties to keep condensation off parts and components during shipping.

Cor-Pak® Fabric LD is an excellent option for the protection of castings and other highly sensitive metals and other common packaging applications include interleaving, wrapping, and lining.

Cor-Pak® Fabric LD is an excellent option for the protection of castings and other highly sensitive metals and other common packaging applications include interleaving, wrapping, and lining.
