NEW PRODUCT RELEASE

Extra Corrosion Protection with Water-displacing Food Grade Lubricant

Cortec® CorrLube® is a light lubricating and deep penetrating oil specially formulated to the needs of food and beverage processing applications. The product provides superior corrosion protection and retards bacterial growth. Having a USDA H-1 rating, CorrLube® can be used for a variety of machinery and equipment in processing food, meat, poultry and beverages.

CorrLube® features deep penetrating capabilities to attack rust and loosen frozen parts. Its powerful penetrating agents quickly free rusted and corroded fasteners to facilitate easy operation of air actuated pins and guides. Once parts are free of rust, the product provides superior corrosion protection for ferrous and non-ferrous metals to inhibit new attack of rust and corrosion. CorrLube® even provides protection to stainless steel and aluminum moving parts. It serves as an excellent anti-corrosion film on equipment during cleaning and idle periods.

CorrLube® can be used for both dry and wet equipment. When applied to wet equipment and components, it displaces the water on the surfaces and replaces it with lubricant and protective film. It lets metal equipment and components shed water and run off the metal surface. Its anti-corrosion film helps prevent any residual attack to equipment from water, misting, and other corrosive agents in oils and greases.

In addition, CorrLube® is formulated with an H-1 approved bacteriostatic preservative. The preservative retards the growth of bacteria which are often present in conventional lubricants. It helps reduce breeding sites for microbes and minimize the spread of bacteria.
