## **VpCI™ Corrosorber Paper Tarnish Inhibitor for Gold, Silver, Brass, Copper and Tin**

Cortec® Corporation's VpCI™ Corrosorber Paper is a dual action tarnish inhibiting protective paper specifically formulated for gold, silver, brass, copper and tin. VpCI™ Corrosorber Paper eliminates the need for coatings and tarnish removers that are often associated with precious metals by emitting vapor phase corrosion inhibitors and simultaneously absorbing corrosive gases. The VpCI™ on the paper safely and quickly vaporizes reaching all metal surfaces to provide complete tarnish protection. VpCI™ Corrosorber Paper will not affect conductivity or surface resistivity.

Cortec's VpCI™ Corrosorber Paper has a special coating that scavenges H<sub>2</sub>S gas, the enemy of precious metal. Best of all, Corrosorber Paper lets you know when you need to replace it. Through proprietary technology, the paper changes from a light blue-green to brown. This visual indicator ensures uninterrupted protection regardless of the environment.

VpCI™ Corrosorber Paper can be used to protect electronic components, silverware, jewelry and during shipping, precious metals for storage or even while in use. VpCI™ Corrosorber Paper combines packaging and tarnish protection into one step. It is non-toxic and contains no nitrites, phosphates, silicones, chromates, or other heavy metals and is effective against aggressive environments including salt air humidity, SO<sub>2</sub>, H<sub>2</sub>S and galvanic corrosion from dissimilar metals.

Cortec® VpCI™ Corrosorber Paper can be used to protect products for storage or shipment.
